

Year 3 & 4 Maths Parent Workshop

Led by Elena Yiapanis

Deputy Headteacher and Maths Subject Lead

Aims of the today's session:

- Look at our calculation policy with a focus on the four operations (addition, subtraction, multiplication and division)
- Discuss how mathematics is taught through a CPA approach (Concrete - Pictorial - Abstract)
- Look at the the concrete resources that we use at school to support mathematical teaching and learning
- Discuss the importance of oracy in maths and mathematical language
- An insight into the 'teaching for mastery' approach to mathematics
- How to support children in adopting a growth mindset in maths so they can achieve their potential.
- How to support your children at home with their maths learning

CPA Approach: Concrete Pictorial Abstract

- **Concrete:** 'doing' the maths - introducing real objects that can be manipulated to bring the problem to life. Eg: money, counters.
- **Pictorial** : 'seeing the maths' - making connections between the concrete and the pictorial representations and the pictorial and the abstract . Eg: part whole models, bar models, ten frames.
- **Abstract:** the ultimate goal is for children to understand abstract mathematical concepts, signs and notation. When a child demonstrates with concrete models and pictorial representations that they have grasped a concept, we can be confident that they are ready to explore the abstract.

The CPA Approach

Maths should be practical for all ages and the CPA approach used at any time and with any age to support understanding

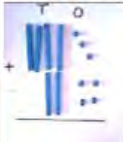

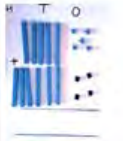

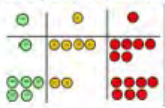

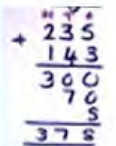

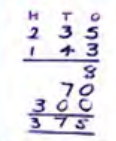

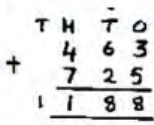

Addition in Year 3 & 4

Calculation policy

Year 3 - Addition

Concrete	Pictorial	Abstract
<ul style="list-style-type: none"> Use of Base 10 for addition up to 3 digits <p>No exchange eg. 43 + 24</p>  <p>Exchanging with ones only eg. 45 + 26</p>  <p>Exchanging tens only eg. 55 + 64</p>  <p>Progressing to: Exchanging hundreds only and exchanging ones and tens</p> <ul style="list-style-type: none"> Use of place value counters for same progressions 	<ul style="list-style-type: none"> Pictorial representation of base 10 and exchanging <p>eg. 43 + 24</p>  <p>eg. 45 + 26</p>  <ul style="list-style-type: none"> Part Part Whole Models  <ul style="list-style-type: none"> Bar Models (Part Part Whole and Comparison)  <ul style="list-style-type: none"> Pictorial Representation of place value counters 	<ul style="list-style-type: none"> Introduced expanded columnar addition <p>Most Significant Digit</p>  <p><i>*supports mental calculation</i></p> <p>Least Significant Digit</p>  <p><i>*supports formal addition</i></p> <ul style="list-style-type: none"> Formal Columnar Addition* (follow same progression as with concrete examples)  <p><i>*Exchanged amounts should be noted at the bottom of the calculation</i></p> <div style="border: 1px solid orange; padding: 5px; margin-top: 10px;"> <p>Oracy Sentence Stems:</p> <p>The calculation tells me I need to add the numbers.</p> <p>If the column total is equal to <u>ten or more</u> we must exchange.</p> <p>I will exchange one hundred for ten tens.</p> <p>___ ones/tens/hundreds add ___ ones/tens/hundred is</p> </div>

Addition of 3 digit numbers

Alongside the manipulatives (for understanding) you will notice we add one column at a time.

First the ones say it then record it.

Then the tens say it then record it.

Then the hundreds say it then record it.

Only towards the end of year 3 do we move towards the compact method - secure in their understanding.

What the children will be moving onto in year 3: column addition

The first bridge between what they know (from Keystage 1) and what they see in the form of the columnar calculation.

Can the children read the number 36? And represent it?

Can the children partition the number into tens and ones?

The same calculation represented with place value counters.

$$\begin{array}{r} 30 + 6 \\ 20 + 2 \\ \hline \end{array}$$

Begin with the partitioned/expanded method

A handwritten addition problem on a whiteboard. The problem is $236 + 73$. The numbers are written in a column, with a plus sign to the left of the second number. A horizontal line is drawn under the second number. Below the line, the numbers are partitioned into their place values: 100, 200, and 9. Another horizontal line is drawn under these partitioned numbers. Below this second line, the final sum is written: 209. A final horizontal line is drawn under the sum.

$$\begin{array}{r} 236 \\ + 73 \\ \hline 100 \\ 200 \\ 9 \\ \hline 209 \\ \hline \end{array}$$

Move onto the formal column method and progress to regrouping

Representing what actually happens in the maths.

Are the children secure in their place value knowledge? How many ones, tens and hundreds are there?

Calculation policy

Year 4 - Addition

Concrete

- Use of Base 10 up to 4 digits

- Use of place value counters for columnar addition

- Use of place value counters for Bar Models (continuous)

Pictorial

- Pictorial Representation of Base 10 and place value counters

- Part-Part-Whole Models

- Bar Modelling (Part-Part-Whole and Comparison)

Abstract

- Continue with expanded columnar addition

Most significant digit

$$\begin{array}{r} \text{TH} \quad \text{H} \quad \text{T} \quad \text{O} \\ + 1 \quad 3 \quad 7 \quad 1 \\ + 2 \quad 0 \quad 4 \quad 2 \\ \hline 3 \quad 0 \quad 0 \quad 0 \\ \quad 3 \quad 0 \quad 0 \\ \quad \quad 1 \quad 1 \quad 0 \\ \hline 3 \quad 4 \quad 1 \quad 3 \end{array}$$

Least significant digit

$$\begin{array}{r} \text{TH} \quad \text{H} \quad \text{T} \quad \text{O} \\ + 1 \quad 3 \quad 7 \quad 1 \\ + 2 \quad 0 \quad 4 \quad 2 \\ \hline \quad \quad 1 \quad 1 \quad 0 \\ \quad \quad 3 \quad 0 \quad 0 \\ \hline 3 \quad 4 \quad 1 \quad 3 \end{array}$$

- Continue with Formal Columnar Addition

Exchange tens to hundreds

$$\begin{array}{r} \text{TH} \quad \text{H} \quad \text{T} \quad \text{O} \\ + 1 \quad 3 \quad 7 \quad 1 \\ + 2 \quad 0 \quad 4 \quad 2 \\ \hline 3 \quad 4 \quad 1 \quad 3 \\ \quad \quad \quad 1 \end{array}$$

Exchange ones to tens and tens to hundreds

$$\begin{array}{r} \text{TH} \quad \text{H} \quad \text{T} \quad \text{O} \\ + 3 \quad 3 \quad 7 \quad 6 \\ + 1 \quad 4 \quad 8 \quad 5 \\ \hline 4 \quad 8 \quad 6 \quad 1 \\ \quad \quad 1 \quad 1 \end{array}$$

Different Number of Digits

$$\begin{array}{r} \text{TH} \quad \text{H} \quad \text{T} \quad \text{O} \\ + 4 \quad 3 \quad 1 \quad 6 \\ + 1 \quad 8 \quad 2 \quad 2 \\ \hline 1 \quad 4 \quad 1 \quad 1 \\ \hline 6 \quad 5 \quad 4 \quad 9 \\ \quad \quad 1 \end{array}$$

Oracy Sentence Stems:

The calculation tells me I need to add the numbers:

If the column total is equal to ten we must exchange.

I will exchange one hundred for ten tens.

_____ add _____ is equal to _____

_____ thousand add _____ thousand is equal to _____ equal

Addition with four digit numbers- 1s, 10s, 100s and 1000

Addition using bar models

If 5,945 is a part and 1,052 is a part, _____ is the whole

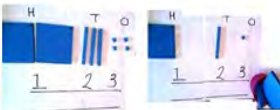

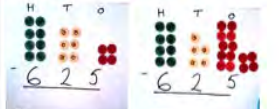

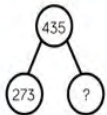

Subtraction in Year 3 & 4

Calculation policy

Year 3 – Subtraction

Concrete	Pictorial	Abstract
<ul style="list-style-type: none"> Use of Base 10 Takeaway Pot 	<ul style="list-style-type: none"> Pictorial representations of Base 10 and place value counters <p>Tens Ones .</p>	<ul style="list-style-type: none"> Formal Columnar Subtraction <p>No Exchange (2 Digits and 3 Digits)</p> $\begin{array}{r} \text{Tens} \quad \text{Ones} \\ 5 \quad 3 \\ - 2 \quad 1 \\ \hline 3 \quad 2 \end{array}$ $\begin{array}{r} \text{H} \quad \text{T} \quad \text{O} \\ 2 \quad 3 \quad 4 \\ - 1 \quad 2 \quad 3 \\ \hline 1 \quad 1 \quad 1 \end{array}$

	<ul style="list-style-type: none"> Bar Models (continuous) 	

Oracy Sentence Stems:

The calculation tells me I need to subtract the numbers.

Whole subtract a part is equal to the difference.

I will exchange one ten for ten ones

I will exchange one hundred for ten tens.

___ subtract ___ is equal to ___

When we subtract, we start with the whole.

Expanded method using partitioning.

Move onto exchange in year 3.

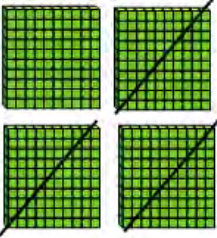

We do not use the word borrow, as it's not accurate and not a method we use anymore, as it doesn't support understanding.

We say exchange!

Move onto formal column method.

No exchange

$$438 - 325 = 113$$

Hundreds	Tens	Ones
		
1	1	3

	H	T	O
	4	3	8
-	3	2	5
	1	1	3

Exchange

$242 - 26 = 216$

Multiplication in Year 3 & 4

Calculation Policy

Year 3 – Multiplication

Concrete

- Cuisenaire tracks to show multiples of numbers

- Area Method: Cuisenaire on Squared Paper
 $6 \times 13 \times 4$

- Grouping Base 10 and Place Value Counters

- Grouping Base 10 with exchange of 1s

Pictorial

- Area Method: Drawn on squared paper (draw round Cuisenaire)

- Grid Method (Area not to scale)

- Jumps on number lines

Oracy Sentence Stems:

To find ten times as many, multiply by ten.

_____ is a multiple of _____ because _____.

_____ multiplied by _____ is equal to _____.

Products in the _____ times table are also in the _____ time table.

When we multiply, the parts are known but the whole is unknown.

Abstract

- Expanded Columnar Multiplication

$$\begin{array}{r} T \quad O \\ 1 \quad 3 \\ \times \quad 3 \\ \hline 3 \quad 9 \\ \hline \end{array}$$

$$\begin{array}{r} T \quad O \\ 1 \quad 3 \\ \times \quad 4 \\ \hline 1 \quad 2 \quad 0 \\ + \quad 3 \quad 0 \\ \hline 4 \quad 2 \quad 0 \end{array}$$

- Formal Columnar Multiplication (Use a multiplier from times tables children are secure with)

- 2 digit by 1 digit (no exchange)

$$\begin{array}{r} T \quad O \\ 1 \quad 3 \\ \times \quad 3 \\ \hline 3 \quad 9 \end{array}$$

- 2 digit by 1 digit (exchange)

$$\begin{array}{r} T \quad O \\ 1 \quad 4 \quad 3 \\ \times \quad 3 \\ \hline 4 \quad 2 \end{array}$$

- 2 digit by 1 digit (3 digit answer)

$$\begin{array}{r} H \quad T \quad O \\ 1 \quad 2 \quad 3 \\ \times \quad 5 \\ \hline 1 \quad 1 \quad 5 \end{array}$$

Year 3 children should know their 2, 5, 10 and 3, 4, and 8 times tables.

Use grouping to represent understanding .

Introduced to the area and grid method.

Move onto expanded and formal column method.

Arrays

Visual representation of
the commutative law

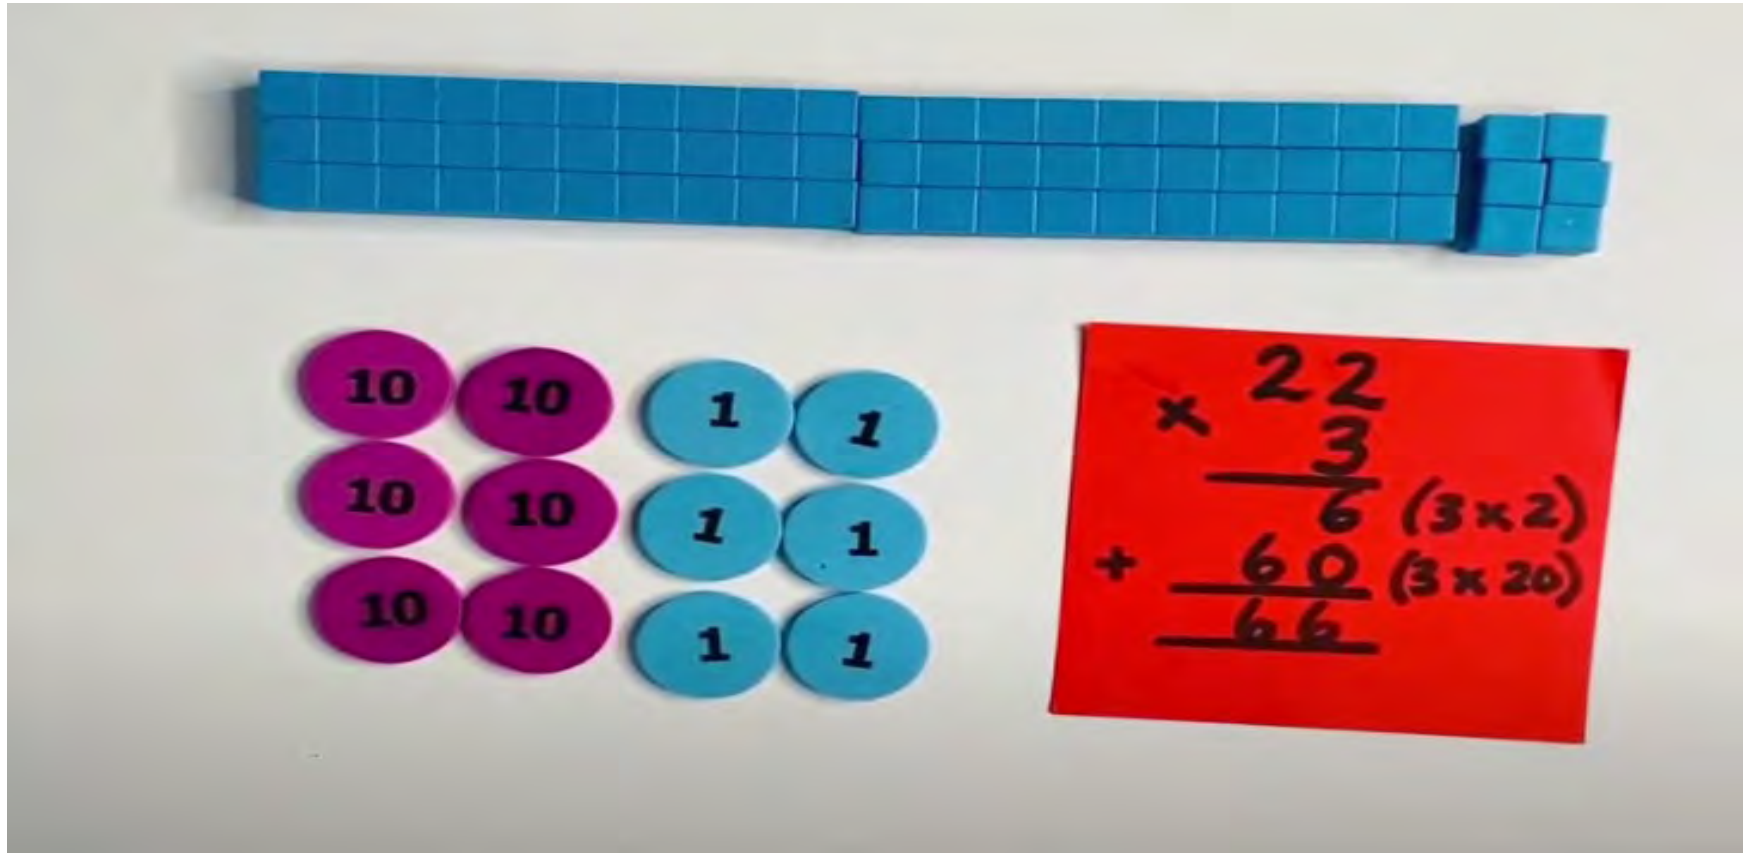

$$3 \times 5 = 15$$

$$5 \times 3 = 15$$

Expanded method year 3

Grid method year

3

First partition the two digit number
e.g. 22 is partitioned into 2 tens and 2 ones

Then multiply each by the multiplier
in this case is 3

Finally add the totals.

Always start in my ones column (like I will when I get to the formal method).

If I know that 3 lots of 2 is 6, then I know that $30 \times 2 = 60$

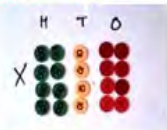

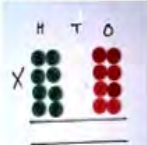

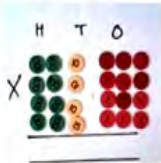

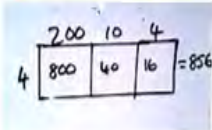

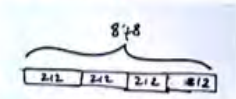

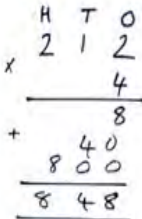

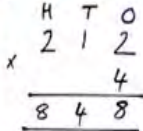

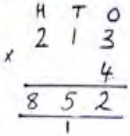

Calculation policy

Year 4 children needs to know all of their multiplication tables up to 12×12 .

Continue with grid and area models

Continue with expanded method and move onto short multiplication.

Year 4 – Multiplication

Concrete	Pictorial	Abstract
<ul style="list-style-type: none"> Use of Base 10 and Place Value counters for 3 digits by 1 digit ex. No exchange (212×4)  Use of 0 (202×4)  Exchange (214×4)  	<ul style="list-style-type: none"> Area Method progressing to Grid Method  Bar Models (Part Part Whole)  <div style="border: 2px solid #4a86e8; border-radius: 20px; background-color: #fce4d6; padding: 10px; margin-top: 10px;"> <p>Oracy Sentence Stems:</p> <p>When zero is a factor, the product is zero.</p> <p>For every group of one twelve, there are two groups of six.</p> <p>All multiples of tens have a ones digit of zero.</p> <p>Products in the <u>times table</u> are also in the <u>time</u> table.</p> <p>All multiples of one hundred have both a <u>hundred</u> and ones digit of zero.</p> </div>	<ul style="list-style-type: none"> Expanded Columnar Multiplication  Formal Columnar Multiplication <p>3 digit by 1 digit (no exchange)</p>  <p>3 <u>digit</u> by 1 digit (1 and 2 exchange)</p> 

The goal – 6 seconds!

- Statutory Year 4 Times Tables Check
- Free website:

<https://mathsframe.co.uk/en/resources/resource/477/ Multiplication TablesCheck>

- Children can see which ones were wrong
- Many creative ways to teach times tables to children: using a counting stick, chanting, repetition, pattern spotting, games, quizzes and more

Grid method

Year 4

The image shows base ten blocks representing the multiplication of 324 by 3. There are three columns of blocks: 100s, 10s, and 1s. Below the blocks is a red sticky note with a grid method calculation.

x	200	30	4
3	600	90	12

$600 + 90 + 12 = 702$

Expanded method Year 4

The image shows base ten blocks representing the multiplication of 234 by 3. There are three rows of blocks:

- Row 1: 6 blocks labeled '100', 9 blocks labeled '10', and 12 blocks labeled '1'.
- Row 2: 6 blocks labeled '100', 9 blocks labeled '10', and 12 blocks labeled '1'.
- Row 3: 6 blocks labeled '100', 9 blocks labeled '10', and 12 blocks labeled '1'.

Below the blocks is a red sticky note with the following expanded multiplication method:

$$\begin{array}{r} 234 \\ \times 3 \\ \hline 12 \\ 90 \\ + 600 \\ \hline 702 \\ \hline \end{array}$$

Regrouping - Short multiplication

$$\begin{array}{r} \text{H T O} \\ 234 \\ \times \quad 3 \\ \hline 82 \\ \hline 702 \\ \hline 702 \end{array}$$

The image shows a base ten block model for the multiplication 234×3 . On the left, there are 234 orange blocks: two hundreds (100), three tens (10), and four ones (1). On the right, there are three blue blocks, each labeled '1', representing the multiplier 3. Below the blocks is a red card with the following multiplication:

$$\begin{array}{r} \text{H T O} \\ 234 \\ \times \quad 3 \\ \hline 02 \\ \hline \end{array}$$

The red card also shows a small 'x' to the left of the multiplier and a small 'x' below the product line.

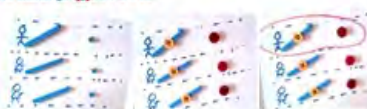

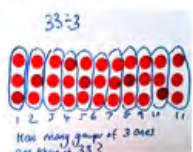

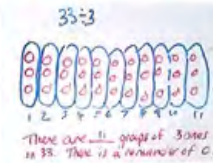

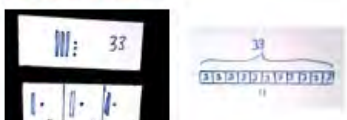

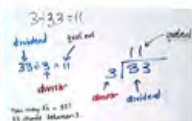

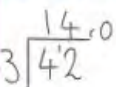

Division in Year 3 & 4

Calculation policy

Year 3 – Division

Concrete	Pictorial	Abstract
<ul style="list-style-type: none"> Link division to multiplication through use of arrays and Cuisenaire tracks and the number sentences that can be created from them. $15 \times 3 = 15$ $5 \times 3 = 15$ $15 \div 3 = 5$ $15 \div 5 = 3$  <ul style="list-style-type: none"> Sharing using Base 10 and moving to place value counters No exchange $33 \div 3 = 11$  <p>Exchange 10 $42 \div 3 = 14$</p>  <ul style="list-style-type: none"> Moving to grouping 	<ul style="list-style-type: none"> Counting back on number lines  <ul style="list-style-type: none"> Representing sharing pictorially  <ul style="list-style-type: none"> Representing grouping pictorially  <ul style="list-style-type: none"> Drawn bar models 	<ul style="list-style-type: none"> Formal short division <p>2 digit \div 1 digit no exchanging and a remainder of 0</p>   <p>2 digit \div 1 digit with exchange and a remainder of 0</p> 
<ul style="list-style-type: none"> Concrete bar modelling (continuous) 		<p>Oracy Sentence Stems:</p> <p>_____ divided by _____ is equal to _____.</p> <p>When we divide, the whole is known and the number or parts or the value of the parts is also known.</p> <p>_____ \times _____ is the same as _____ groups of _____.</p> <p>When we divide _____ by _____ there is a remainder of 0 which means it can divide equally.</p>

Division facts for the 3, 4 and 8 times tables.

Dividing 2 digits by a 1 digit number.

Introduce short division.

No remainders, only carrying!

Short division

$$45 \div 5 = 9$$
$$\begin{array}{r} 09 \\ 5 \overline{) 45} \end{array}$$

The Teaching for Mastery Approach

What does it mean to master something?

- I know how to do it
- It becomes automatic and I don't need to think about it
- I'm really good at it- painting a picture
- I can show someone else how to do it

Teaching for Mastery: The 5 Big Ideas

Making generalisations

- If you change the position of the numbers in a multiplication calculation, the answer will always stay the same.

E.g. $4 \times 5 = 20$ and $5 \times 4 = 20$ (commutativity)

- All even numbers end in 0, 2, 4, 6, 8
- When counting in 10s, the ones digit always stays the same but tens digit changes

Representation and Structure

- Representations are used in lessons to expose the mathematical structure being taught.
- In essence representation refers to the wide variety of ways to capture an abstract concept or relationship.

Multiple representations of the same number.

Number		Number word
47		Forty seven
Draw it		Expanded form
Tens	Ones	$40 + 7 = 47$ $7 + 40 = 47$
	

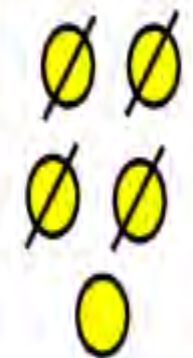

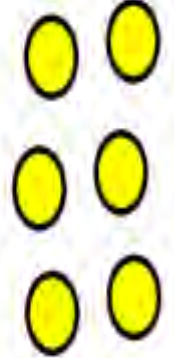

Mathematical Thinking

- If taught ideas are to be understood deeply, they must not merely be passively received but must be worked on by the pupil: thought about, reasoned with and discussed with others.
- We provide lots of opportunities for peer and collaborative discussions in our daily maths lessons.
- Problem solving and reasoning opportunities in every session to embed a depth of learning

Reasoning: Spotting mistakes and misconceptions

Alex thinks the chart shows $456 - 4$
Do you agree?

Hundreds	Tens	Ones
		

Rosie completes this subtraction incorrectly.

$$\begin{array}{r} 28701 \\ - 7621 \\ \hline 21180 \end{array}$$

Explain the mistake to Rosie and correct it for her.

Reasoning: True or false?

True or False?

$$49,999 - 19,999 = 50,000 - 20,000$$

Dora

I did not need to use a written method to work this out.

Can you explain why Dora's method work?

Can you think of another example where this method could be used?

Reasoning: Always, sometimes or never true?

Always, sometimes, never

- When multiplying a two-digit number by a one-digit number, the product has 3 digits.
- When multiplying a two-digit number by 8 the product is odd.
- When multiplying a two-digit number by 7 you need to exchange.

Prove it.

The logo for 'Times Tables Rockstars' features the words 'TIMES TABLES' in blue and 'ROCKSTARS' in pink, both in a stylized, jagged font. Below the logo, it says 'BETA PREVIEW' and 'Beta will be available for teachers to use games with their own classes from 2019. For more information visit https://ttrockstars.com for more information.' There is also a 'Log In Now' button.

Fluency

Enfield
Heights
ACADEMY

- Quick and efficient recall of facts and procedures and the flexibility to move between different contexts and representations of mathematics.
- Playing cards in class for times table practice
- Hit the button - Topmarks for quick fire number fact practice
- TT Rockstars- all KS2 classes set up- an exciting online resource for times table practice.
- Weekly times tables quizzes
- Number fact fluency work

Using known number facts: if we know this, what else do we know?

6

$$60 \times 30 = 1800$$

$$600 \times 300 = 180,000$$

$$60 \times 3 = 180$$

$$6 \times 3 + 1 = 19$$

$$18 = 3 \times 6$$

$$18 \div 3 = 6$$

$$6 = 18 \div 3$$

$$0.5 \times 12 = 6$$

Conceptual variation

- This is about all about how the teacher represents the concept being taught
- An opportunity to work on different representations of the same mathematical idea.
- These multiple representations will 'showcase' to pupils the different conceptual ideas that underpin a mathematical idea.

Variation helps visualisation

Everyone Can!

At Enfield Heights we encourage children to develop a **growth mindset** by using these strategies:

- It's ok to get it wrong- mistakes are valuable opportunities to re think and understand more deeply. Spotting and sharing mistakes between teachers and pupils makes learning richer.
- Praising hard work- is a great motivator by focusing on effort rather than success. Children will be more willing to try harder and take risks.
- Mind your language- the language we (teachers and parents/ carers) use around learners has a profound effect on their mindsets. Make a habit of using growth phrases like 'everyone can', 'mistakes can help you learn', 'just try for a little longer' and the key of them all- 'yet'. 'I just cannot solve this yet!'

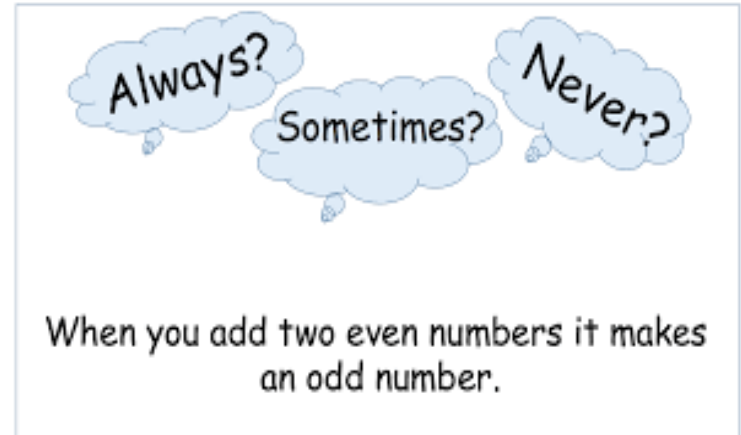

Maths Talk

- **Key Vocabulary:** Discussing essential vocabulary
- **Full sentences** : Teachers and children need to use full sentences to explain or respond. When children use complete sentences, it both reveals their understanding and embeds their knowledge.
- **Stem sentences:** These help children express mathematical concepts accurately and scaffolds their responses.
Eg: '4 is a part, 5 is a part, 9 is the whole.'
- **Consistency:** all use same mathematical terms in full, i.e ones instead of units

Ways to encourage maths talk at home

- Why is that a good mistake?
- If we know this, what else do we know?
- Give me . . . tell me . . . show me . . .
- Why is this the odd one out?
- The answer is . . . what is the question?
- Give me a silly answer for . . . ?
- Always, sometimes, never true?

Any questions?
